

Ganil Batist

DevOps Engineer

Highly skilled IT professional with 1.5+ years of experience in technical infrastructure support and DevOps practices. Proficient in designing and optimizing cloud-based microservices, IaC, containerization, CI/CD pipelines, and monitoring solutions. Adept at collaborating with teams to deliver scalable, secure systems while leveraging cutting-edge technologies for operational excellence.

KEY SKILLS

Operating Systems: Linux (Ubuntu, CentOS, RHEL), Windows Server

Scripting & Automation: Bash, Python, and Go

Cloud Techonogy: AWS, Azure and Google Cloud

Containerization: Docker, Docker Compose, Kubernetes

Version Control: Git

CI: Jenkins, Azure Devops, Gitlab

CD: Azure Devops, AgroCD

Configuration Mgmt: Ansible

Observation: Prometheus, Grafana, Loki

Networking & Security: TCP/IP, DNS, VPNs, Active Directory

Soft Skills: Creative thinking, collaboration, time management

Other: Agile workflows, accessibility standards, responsive design

PROFESSIONAL EXPERIENCE

IT Support Technician
SIS-Technologies Ltd | Bronx, NY
June 2019 – Present

Infrastructure Maintenance: Managed the day-to-day support and maintenance of critical technical infrastructure, including server hardware, virtual environments (VMware), and network systems for a base of 50+ users.

Automation Focus: Developed and implemented Bash and Python scripts to automate repetitive tasks such as log rotation, system health checks, and user provisioning, improving operational efficiency by approximately 15%.

System Administration: Administered and maintained Windows Server and Linux-based systems, focusing on patch management, security hardening, and troubleshooting complex service outages (e.g., DNS, DHCP, file shares).

Incident Response & Monitoring: Utilized ticketing and monitoring tools (e.g., Nagios, Jira) to rapidly diagnose, track, and resolve system and application issues, ensuring high availability of core business services.

Process Improvement: Documented and standardized deployment and configuration procedures for end-user workstations and network devices, laying the groundwork for more scalable Infrastructure as Code (IaC) practices.

PROJECTS

Microservices Deployment on AWS with Kubernetes

Designed and deployed a scalable microservices architecture using Docker, Kubernetes, and AWS EKS. Automated infrastructure provisioning with Terraform, reducing manual setup time by 50%. Integrated monitoring with Prometheus and Grafana for real-time insights into application performance.

CERTIFICATIONS

Relevant Certifications (Placeholder – highly recommended for DevOps)
AWS Certified Cloud Practitioner or Solutions Architect – Associate
Docker Certified Associate (DCA)
CompTIA Network+ or Linux+
